

# McAfee SaaS Endpoint Security Suites

Security-as-a-Service that's always on guard

New threats are evolving daily and in greater numbers than ever before. Spam, phishing, viruses, web threats, and hackers can steal your valuable data and disrupt your network. Without constant updates, your security software becomes obsolete. Keeping your business continuously up to date requires total protection against all types of known and unknown threats. McAfee® SaaS Endpoint Security Suites safeguard your desktops, file servers, and email servers—with the convenience and ease of maintenance of a single, integrated Security-as-a-Service (SaaS) solution.

## Key Advantages

### Security in one SaaS solution

- Single, integrated solutions for the desktop, file server, and email that are easy to install and easy to maintain

### Easy and affordable

- Get virus, spyware, spam, web security, phishing, and desktop firewall protection, web-based management and reporting; automatic updates and upgrades; and around-the-clock technical support for an annual low-cost subscription fee
- Reduce the need for additional security management software, hardware, technical support, or dedicated IT staff. McAfee manages the security SaaS infrastructure off site and provides automated maintenance and reporting.

### McAfee SecurityCenter simplifies management

- With this simple-to-use, web-based console, you manage and generate reports on your security services
- Quickly customize reporting dashboards for better visibility
- Create multiple user groups, centralize all installations, configurations, reports, and schedule updates

Comprehensive protection for your business means an integrated security solution that is always on guard and always up to date—not just in the office, but also wherever employees work remotely. McAfee SaaS Endpoint Security Suites, the industry's first truly integrated SaaS solutions, provide protection against endpoint, email, and web threats—all managed online through the McAfee SecurityCenter.

## Lower Total Cost of Ownership

With a McAfee security SaaS solution, you reduce your software licensing costs and management hardware investment by subscribing to our

expertise and managed infrastructure. Ideal for organizations of all sizes, McAfee SaaS Endpoint Security Suites automate security and free your IT staff from complex deployments, upgrades, and management. McAfee Gold Technical Support is included in the subscription for easy access to trusted security experts by phone, chat, and email.

McAfee SaaS Endpoint Security Suites consolidate security with the following package offerings—all with instant access to the online McAfee SecurityCenter for centralized management.

	McAfee SaaS Endpoint and Email Protection Suite	McAfee SaaS Endpoint Protection Advanced Suite	McAfee SaaS Endpoint Protection Suite
McAfee SecurityCenter, for centralized visibility through an online management console	✓	✓	✓
Desktop and file server anti-virus and anti-spyware scan and block out malware	✓	✓	✓
Desktop firewall blocks hackers and intrusions	✓	✓	✓
Web security for safe surfing	✓	✓	✓

Email server protection scans for viruses and spam in house	✓	✓	
Email scanning stops malicious spam and phishing attacks in the cloud	✓		

### System Requirements

McAfee SaaS Endpoint Security Suites are designed for the Microsoft Windows operating systems running on a PC platform.

Note: The following are general system requirements and may vary depending on your environment.

- CPU: Intel Pentium processor or compatible architecture
- RAM: 512 MB minimum (one to two GB recommended)
- Internet connection: Microsoft Internet Explorer 5.5 with SP2 or later

### Workstations

- Microsoft Windows XP Home or Professional with SP2 or later (32- and 64-bit)
- Microsoft Windows Vista (32- and 64-bit)
- Microsoft Windows 7 (32- and 64-bit)

### Servers

- Microsoft Windows 2003 Standard Server: Enterprise, Web Edition, or Small Business
- Microsoft Windows 2008 Server (32- and 64-bit): Standard, Enterprise, Small Business, or Essential Business Server
- McAfee SaaS Endpoint and Email Protection Suite requires that you own a unique email domain name and an email server with a static IP address

### Comprehensive Coverage in a Single Solution

McAfee SaaS Endpoint Security Suites are designed for businesses of all sizes, providing endpoint, email, and web security against the latest known and unknown threats, helping you put an end to point product proliferation with single, integrated solutions.

### Quick Deployment to All Users

Regardless of where your users are located, simply email them the customized installation link for quick deployment over the Internet so that they can get on board and get protected. Additional push or silent installation options are also available.

### Always On-Guard Security

Enjoy uninterrupted endpoint protection that's never obsolete with daily, automated updates and service upgrades through the McAfee security SaaS platform. Simply install the protection, and with the system connected to the Internet or an Internet relay, McAfee SaaS Endpoint Security Suites automatically protect and update all systems at regular intervals throughout the day, as well as providing software upgrades to the latest version—all without interruption to the end user. Also customizable from the McAfee SecurityCenter is the ability to schedule upgrades for your environment whenever it's convenient. Fast and transparent updates keep your desktops, servers, and email proactively protected against ever-evolving virus, spam, spyware, and hacker attacks.

### McAfee Global Threat Intelligence™ File Reputation Technology

Integrated into McAfee SaaS Endpoint Security Suites, McAfee file reputation technology is always-on protection that uses signature and behavioral-based scanning to reduce exposure from unknown threats. McAfee file reputation technology quarantines and blocks threats in real time and closes any protection gap in your security. Feel secure knowing that this technology is keeping your users continuously protected from advanced threats even before the signature is developed—anytime, anywhere.

### Simplified Security Management

From the web-based McAfee SecurityCenter console, centralize installation, Microsoft Active Directory synchronization, configuration, reporting, updates, and group management. With any web browser, access the secured McAfee SecurityCenter to customize reporting widgets, schedule reports and upgrades, or run virus and spyware scans.

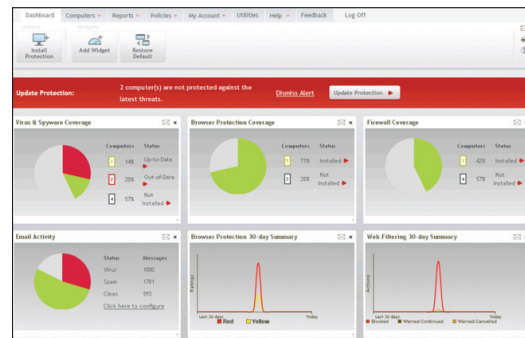

Figure 1. The McAfee SecurityCenter provides centralized management of installations, reporting, and policy setting.

### Integrated Web Security

McAfee SiteAdvisor® technology warns users before they visit a potentially dangerous website and helps to avoid online threats in real time. By testing websites and delivering safety ratings to users while they browse, McAfee SiteAdvisor helps users stay safe online. And through the McAfee SecurityCenter, you can extend your protection and customize web policies to filter out unwanted, unproductive, or malicious websites.

### Advanced, Real-Time Email Security

McAfee SaaS Endpoint and Email Protection Suite processes email in real time through a highly secure system. Filter and quarantine inbound and outbound threats from your email before they reach your network—no installation is required. Compatible with all major email applications, such as Microsoft Exchange, our email security service simply redirects your inbound and outbound email to McAfee and scans your mail with less than a one-second delay. McAfee additionally offers email server protection for users who would like to monitor email security in house.
